

Bilkul bhai. Tumhare uploaded project files ke basis par **SRS/Project Report mein directly paste karne layak proper “System Requirements” page** ye rahega. Maine sirf wahi technologies/features rakhe hain jo current project files se supported hain.

package

System Requirements

SYSTEM REQUIREMENTS

1. Hardware Requirements

The following hardware configuration is recommended for developing and running the Smart Procurement – Centre Portal:

Component	Minimum Requirement
Processor	Intel Core i3 or equivalent
RAM	4 GB minimum
Storage	At least 5 GB free space
Display	1366 × 768 resolution or higher
Internet Connection	Required for installing project dependencies and development
Keyboard & Mouse	Standard keyboard and mouse

2. Software Requirements

The system requires the following software and development tools:

Software / Technology	Requirement
Operating System	Windows 10 / Windows 11
Code Editor	Visual Studio Code
Frontend Framework	React.js
Programming Language	JavaScript / JSX
Build Tool	Vite

Routing	React Router DOM
Styling Framework	Tailwind CSS
Package Manager	npm
Web Browser	Google Chrome / Microsoft Edge
Version Control	Git / GitHub

The project is configured as a Vite-based React application and uses React, React DOM, and React Router DOM.

Tailwind CSS is configured for the project's HTML, JavaScript, and JSX files.

3. Functional Requirements

The Centre Portal shall provide the following major functionalities:

1. **Centre Dashboard** – Provides an overview of procurement-related activities.
2. **Today's Procurement** – Allows centre personnel to manage and view current-day procurement activities.
3. **Token Management** – Provides facilities for managing farmer procurement tokens.
4. **Farmer Management** – Allows centre personnel to access and manage farmer-related information.
5. **Centre Members** – Provides management of centre staff or members.
6. **Schedule Management** – Provides access to procurement schedules.
7. **Procurement Records** – Maintains and displays procurement-related records.
8. **Notifications** – Provides important alerts and notifications to centre personnel.
9. **Payment Management** – Provides access to payment-related activities.
10. **Centre Profile** – Allows centre information/profile details to be accessed.
11. **Help Centre** – Provides support facilities for users.
12. **Logout** – Allows the user to exit the Centre Portal.

These modules are represented in the current Centre Portal navigation structure.

4. Non-Functional Requirements

4.1 Usability

- The interface should be simple and easy to understand.

- Navigation should be clear and consistent.
- Important modules should be easily accessible from the sidebar.

4.2 Performance

- The application should load pages efficiently.
- Navigation between different portal modules should be responsive.
- The system should provide a smooth user experience during normal operation.

4.3 Maintainability

- The application should use a structured React component-based architecture.
- Code should be organized into reusable components and modules.
- ESLint is configured to support code quality and consistency.

4.4 Compatibility

- The application should run on modern web browsers such as Google Chrome and Microsoft Edge.
- The project uses a responsive viewport configuration for web display.

4.5 Scalability

- The system structure should allow additional procurement modules and features to be added in the future.
- React Router provides a structured way to manage multiple portal pages/routes.

5. Development Requirements

The project can be executed using the following npm commands:

- `npm install` – Install project dependencies.
- `npm run dev` – Start the development server.
- `npm run build` – Create the production build.
- `npm run lint` – Check the project code using ESLint.
- `npm run preview` – Preview the production build.

These commands are defined in the project's `package.json`.

6. Technology Stack

Frontend: React.js

Language: JavaScript / JSX

Build Tool: Vite

Routing: React Router DOM

UI Styling: Tailwind CSS

Package Management: npm

Code Quality: ESLint

Version Control: Git / GitHub

7. System Environment

The Smart Procurement – Centre Portal is designed as a web-based application. The frontend runs in a modern web browser, while the development environment uses Node.js/npm to install dependencies, run the Vite development server, and generate the production build.

Report mein is page ko “Chapter 3 → System Requirements” ya “4. System Requirements” ke naam se rakh sakte ho, depending on tumhare SRS ka chapter numbering.
